For Immediate Release

Naisp.net launches an 11Mbps wireless beta test in the North Attleborough Industrial Park.

North Attleborough, MA- August 21, 2001--

[Naisp.net](#) the Internet division of [North Attleborough Electric](#) (NAE) launched an 11Mbps wireless link in the North Attleborough Industrial Park on Friday August 17. Two Industrial Park tenants have agreed to test the system, Greenwood Fire & Apparatus and Action Automation. The 802.11b compatible wireless equipment will be evaluated during the test period prior to the infrastructure build out designed to blanket the Industrial Park. This fixed wireless service offers an affordable broadband alternative to the tenants of the Industrial Park. Naisp.net is working closely with ASCIO Wireless, from Brockton MA, to complete the installation of the wireless equipment.

Utilizing NAE's existing infrastructure of utility poles, [naisp.net](#) plans to pass wireless signals from the customer premises to an antenna equipped utility pole back to a 70ft tower located atop the NAE's operations building. Pricing and network build out plans are to be finalized by late September.

About naisp.net-

[North Attleborough Internet Service Provider/naisp.net](#) opened for business in late 1998 as a service of North Attleborough Electric Department and provides Internet related services primarily to Rhode Island and Massachusetts. Headquartered in North Attleborough, Massachusetts, naisp.net provides a full service menu for both residents and businesses including Internet access, web hosting, server co-location, and dedicated solutions.
